

Dr. Andrey Penzev, Cryogenic Ltd, London, UK

The B.Verkin Institute for Low Temperature Physics and Engineering(ILTPE) is a bespoke scientific institution with a well-established scientific school. Taking a PhD degree course at ILTPE gives an opportunity to acquire deep knowledge of fundamental physics as well as many applied aspects, and to gain real skills in experimental research. It opens a wide window to continue carrier at many leading research institutions(in my case Tokyo University and CEA-Saclay) and research equipment industry all over the world.
